

Actus Clip Factory

Don't Just Record Media - Turn it Into an Asset

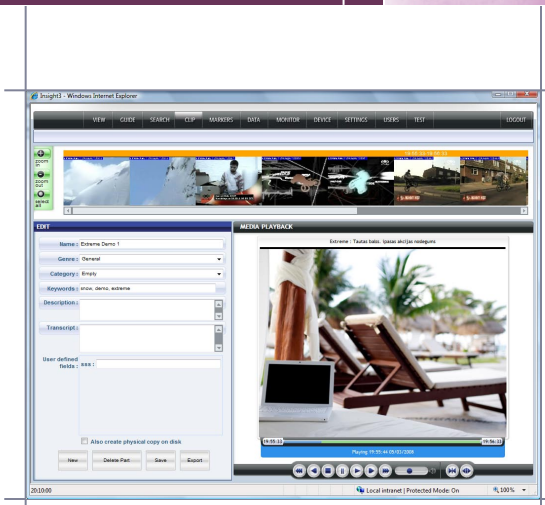

Actus Clip Factory is a powerful product capable of adding data to your media, including broadcast TV, radio, CCTV, or any other video or audio source. Turn your media into assets by adding intelligence to your media.

Main Features:

- Capture transcript/closed-captions
- Annotate any media time range
- Navigate using Electronic Program Guide (EPG)
- Create and edit clips
- Automatic web publishing
- Manage multi-item clip library
- Text search of all available information such as annotations, clips and EPG
- Export and E-mail media items and clips
- Record any number of channels for any amount of time¹

¹ based on Actus Clip Factory, see full specs for details

Main Applications:

- Web clip creation for publishing or external party monetizing
- Commercials and intelligence tagged media creation
- Advertising marketing assistance
- Media and metadata sharing and collaboration
- Military, police, political and government intelligence

Actus Clip Factory is the ideal tool for media agencies that require heavy data tagging and multi channels recording for the corporate, educational, government and TV Broadcast markets!

- Comprehensive cut-to-cut clip editor, with mark-in, mark-out, storyboard and metadata
- Extremely fast text search using Windows Indexing engine, listed with recorded media
- Timeline display of time ranges, with navigation in the recorded media
- Long-term clip retention by producing real content replica on demand
- Preventing automated erasure of older content
- Submit recorded time ranges and clips, optionally with annotations, to E-mail recipients as links or actual attachments
- Open standard relational database (SQL Server or MySQL)

Recording Unit Specifications

- Record content to WMV files using Microsoft WMV9/VC-1 or MP4 files using H.264/AVC
- Web-based user interface uses installed Windows Media Player or Flash Player
- Compatible with web streaming out of the box
- Content is available through system user-interface, streaming video, or network file access
- 4, 8, 12, 16, 20 or 24 audio/video feed inputs
- Composite NBC or S-Video for each input
- Unbalanced RCA stereo audio for each input
- Optional for 1-6 SDI connections with multiple audio streams
- Supports PAL, NTSC or SECAM, all variants
- Configurable frame size up to full frame (720x480 for NTSC and 720x576 for PAL)
- Configurable frame rate (up to 30 on NTSC, 25 on PAL)
- Configurable on-frame overlay in recording or export, static (such as channel name) and dynamic (such as date and time)
- Configurable bitrates up to broadcast-quality (multiple mbps)
- Support for multiple bitrate recording for a single source
- Based on Windows – XP Pro and 2003 Server supported
- Automated removal of old content to make space of new content
- Configurable storage, including any external network storage and the internal storage
- RAID5 internal 3TB net storage, good for 550 24-hour days of content at 512kbps quality total
- Configurable recording schedule, with multiple schedule per single channel
- Export any time range to any bitrate at WMV9, FLV, MPEG-2, H.264 and other formats
- On-screen, audio, E-mail and SMS alerts on no-audio, low-audio, high-audio, no-video and frozen image
- Scale to multiple units managed centrally in the same user interface
- Open HTTP-based API for integration with 3rd side applications
