Back Light Compensation: ON/OFF Switchable

Kocchi's(www.kocchis.com) new released *License Plate Recognition Camera System* which might benefit your business with its new and unique feature.

Viewing objects surrounded by bright&strong light!

Kocchi's family of cameras is specifically engineered to deliver high quality, human readable images of license plates under all lighting conditions. A common complaint by security professionals is that their current camera solution specifically deployed for recording vehicle license plates does not deliver reliable results. The average outdoor installation undergoes changing lighting conditions over the period of a day. A typical camera deployment is set up for an average condition. The result is washed out or too dark images, unusable for the purpose they were destined for: being able to read the license plate number.

The Kocchi's camera family uses our proven proprietary technology developed to deliver highly accurate machine readable images in all conditions to deliver crisp, easily readable images of vehicle license plates at any time of the day.
