Sundance and Kane Computing shake on a deal

August 2008, Northwich, UK. Kane Computing Ltd (KCL) and Sundance Multiprocessor Technology Ltd (Sundance) have today shaken hands on a deal for KCL to represent Sundance in the UK, to promote and sell their range of advanced digital signal processing (DSP) and reconfigurable FPGA products and systems.

Sundance, who have been in the business for 20 years, have been very busy recently with the announcement of a number of new leading edge products and systems and also with expanding their world wide presence with the recent opening of an office in China to add to their Italian, French and Hong Kong (Asia) offices.

Flemming Christensen, Managing Director of Sundance confirmed "Since opening the China office and expanding our international business generally, we have seen a steady growth of interest in Sundance's concept of modular embedded systems and the traditionally strong home market has been neglected. To work with KCL to support and develop the UK market was an opportunity that could not be missed."

"Having known Sundance, and its team, since it started developing its first products, I was very excited to be given the chance to work with them at a time, when so many new and exciting products are being launched", said Richard White, Managing Director of KCL.

Recently Sundance have announced a high performance, high reliability, Reconfigurable, Accelerating, Scalable, Super computer (RASS), based on a modular, interchangeable array of high performance FPGAs and CPU's to deliver high performance, low latency and flexibility for many computable applications.

Other new embedded systems include the Digital Video Infrastructure Platform (DVIP) based on the latest FPGA and DSP processing technologies.

About Kane Computing Ltd.

KCL (www.kanecomputing.co.uk) has been providing Image Processing, DSP and high performance computing products for use in industry, education and research since 1987. KCL has extensive knowledge and experience of providing video compression solutions for many industries particularly for digital video security and high quality broadcast applications. KCL has a policy of continual improvement and operates its business in accordance with the requirements of ISO9001:2000. KCL is also approved under the Investors in People programme.

About Sundance

Sundance (www.sundance.com) designs, develops, manufactures and market internationally high performance signal processing and reconfigurable systems for original equipment manufacturers in the wireless and signal processing markets. Leveraging its multiprocessor expertise and experience, Sundance provides OEMs with modular DSP and FPGA-based systems as well as data acquisition, I/O, communication and interconnectivity products that are essential to multiprocessor system where scalability and performance are essential. With over fifty different modules and carriers for PCI, cPCI, VME and Standalone platforms, Sundance is a solution provider to semiconductor, pharmaceutical and factory automation industries. Sundance, founded in 1989 by the current directors, is a member of the TI Third Party Program, Xilinx Alliance Partner and MathWorks' Connection Programs.
